

Rock Amp Legends

virtual guitar amp plug-in for Mac & PC

Rock Amp Legends by Jimmy Crespo. Nomad Factory has collaborated with guitarist Jimmy Crespo to custom-build the definitive guitar amp simulator plug-in.

As a member of Aerosmith (1979-1984), the lead guitarist on a two-year world tour with Rod Stewart, and recording and performing credits that include Stevie Ray Vaughn, Jeff Beck, Stevie Nicks, Jon Bon Jovi, Clarence Clemons, Little Steven, Billy Squier, Bernie Taupin, Julian Lennon, and many others, Jimmy knows guitar tone! With guitar in hand, Jimmy Crespo worked in the studio with Nomad Factory to capture the signature sound behind Rock's biggest hits and design the best-sounding amp simulator plug-in on the market. Whether you play crunchy riffs, clean rhythms or screaming solos (or just want to "re-amp" a dry guitar track), the results speak for themselves. (Check out the samples of Jimmy Crespo's playing through the amp of his dreams!)

Of course, Nomad Factory is known for building very musical pro audio tools. In designing this amp, Nomad Factory was also determined to reproduce the responsiveness and "feel" of a true guitar amplifier. Just like the amazing guitar tones, the playability is second-to-none.

Download File (all formats for Mac & PC):

System Requirement:

Macintosh® RTAS/AS, VST, AU - Universal Binaries -

Macintosh G4, G5 and Intel Macs with Mac OS 10.3.9 or later, 512 MB RAM, 1027 x 768 screen resolution, high quality audio interface with sample rates from 44 KHz to 192 KHz.

Windows® RTAS/AS, VST

Intel Pentium III or Pentium IV system with Windows XP/Vista32, 512 MB RAM, 1024 x 768 screen resolution, high quality audio interface with sample rates from 44 KHz to 192 KHz.

Authorization:

Challenge/Response or iLok

Demo Download

You can download full functional demo versions of Rock Amp Legends in different formats for Mac and PC using the following links. The instruction for installing and authorizing for a 10 days demo period is included in the download files.

Windows XP Version (.zip Files): [Rock Amp Legends Demo – VST/RTAS](#)

Mac OSX Version (.dmg File): [Rock Amp Legends Demo – VST/RTAS/AU](#)

Features

- Amp Simulator (various British and American Rock Amp Models)
 - Input (with Low and High level)
 - Stage Tube Emulation
 - Tremolo (with Rate and Depth)
 - Auto-Pan (with Rate and Depth)
 - Stereo Imager (spatializer)
 - Chorus (with LFO Speed, Depth, and Mix)
 - Phaser (with LFO Speed, Depth, and Mix)
 - Delay (with Time, Feedback, Width and Mix controls)
 - Compressor (with, Attack, Release, Threshold, Ratio, Pre/Post insert and Makeup Gain)
 - Noise Gate (with, Attack, Release, Threshold, Hold Pre/Post insert and Range)
 - EQ (Presence, Treble, Middle and Bass)
 - Reverb
 - Master Volume
 - Parametric Equalizer (3 band)
 - Drive (Overdrive)
 - Low CPU requirements
 - High quality processing
 - Up to 48 kHz sample rates supported
 - Automate any control
-

Compatible Sequencers and Editors

Sequencers and sound editors compatible with VST, RTAS/AS, AU plug-ins, such as Cubase, Nuendo, V-Stack, Logic Audio, Digital Performer, Sonar, Sound Forge, Cool Edit Pro, Peak, Live, Pro Tools TDM, Pro Tools LE, Rax, AU Lab, WaveBurner, Garage Band, Adobe Audition, Tracktion, DSP-Quattro, Sagan Metro and any audio application that fully supports one of the above mentioned plug-in standards.
